Profile Description

I'm an ICT graduate (NQF Level 6) and Full Stack Developer dedicated to continuous learning and innovation. With a passion for both design and development, I build responsive, data-driven web applications that solve real-world problems. I focus on growth, creativity, and contributing meaningful value within the Information and Communication Technology space. Additionally, I am the **CEO and founder of two businesses**, demonstrating leadership, entrepreneurship, and the ability to drive projects from concept to execution

Education

Diploma in ICT Business Analysis, *Durban University of Technology* 01/2022 – 06/2025
Diploma in Information and Communication Technology – Business Analysis Pietermaritzburg

(NQF Level 6) Focused on bridging business and technology through systems analysis, database management, software development, and enhancing my effectiveness as a Full Stack Developer and ICT professional.

Matric, *Mashalaza High School* 01/2017 – 12/2021
Science Stream: Completed matric with a focus on Mathematics, Physical Science, Life Science, and Agricultural Science. This academic foundation developed strong analytical, logical, and problem-solving skills, which contribute to my effectiveness as a Full Stack Developer and ICT professional. Manguzi

Skills

- Computer Literacy
- Python
- CSS
- AI Models
- Problem Solving
- React
- HTML
- MongoDB
- CRUD operations
- REST APIs
- UI/UX understanding
- Team collaboration
- Time management
- C#
- JavaScript
- GitHub
- PostgreSQL
- Power point presentation
- Node.js
- CSS
- TypeScript
- Supabase
- Firebase
- Responsive design
- Communication skills
- Adaptability

Certificates

Drivers License

Holder of a valid **Code 10 (C1) driver's license**, demonstrating responsibility, reliability, and the ability to operate medium-sized vehicles safely and efficiently.

Artificial Intelligence

Successfully completed a 2-hour DataCamp course on Understanding Artificial Intelligence, gaining foundational knowledge of AI concepts, including machine learning principles, neural networks, and real-world applications. Developed an understanding of how AI systems analyze data, make predictions, and support decision-making, with practical exposure to AI workflows and tools.

JavaScript Algorithms And Data Structure

Completed training in JavaScript Algorithms and Data Structures on freeCodeCamp with a strong foundation in algorithmic problem-solving, core data structures, and common algorithms such as searching, sorting, and recursion. Familiar with ES6+ JavaScript features and performance analysis using Big O notation, with hands-on experience solving and optimizing coding challenges.

Geekulcha_Hackathon_Certificate

Participated in the Geekulcha Annual Hackathon (26–28 September 2025) as part of the team *Code Bros*, developing the **Youth Link** solution. Gained hands-on experience in collaborative problem-solving, innovative solution design, and applying technology for sustainable development.

Responsive Web design

Completed the Responsive Web Design certification on freeCodeCamp, with hands-on experience building mobile-first, responsive web pages using HTML5 and CSS3. Familiar with CSS Flexbox, Grid layouts, media queries, and basic accessibility best practices.

Project Coordinator & events

Experienced in planning and executing projects and events, coordinating teams, managing schedules and resources, and ensuring successful outcomes through effective communication and problem-solving.

Languages

- English
- Isizulu

Projects

Weather Application

Developed a responsive web-based Weather Application that provides real-time weather updates for any location. Built using modern web technologies, the app integrates APIs to fetch accurate weather data and presents it through a user-friendly interface. Features include temperature display, weather conditions, and dynamic visuals, enhancing user experience and demonstrating proficiency in front-end development, API integration, and responsive design.

Job Application Tracker

Developed a web-based Job Application Tracker to help users organize and monitor their job applications efficiently. The application allows users to add, update, and track applications, set statuses, and view progress at a glance. Built using modern web technologies, it demonstrates skills in front-end and back-end development, database management, and creating intuitive, user-friendly interfaces.

Shopping List API

Developed a RESTful API using **Node.js** and **TypeScript** to manage shopping lists efficiently. The API supports **creating, reading, updating, and deleting** items, with robust validation and error handling to ensure data integrity. Implemented consistent JSON responses and type safety, demonstrating skills in backend development, API design, and maintainable, scalable code.

Music Playlist API

Developed a RESTful API using **Node.js** and **TypeScript** to manage music playlists efficiently. The API supports **creating, reading, updating, and deleting** songs and playlists, with robust validation and error handling to ensure data consistency. Implemented type safety, structured JSON responses, and scalable design, demonstrating strong backend development and API design skills.

Redux Dictionary App

Developed a dynamic web application using **React** and **Redux** to provide users with definitions, synonyms, and pronunciations of words. Integrated external dictionary APIs to fetch real-time data and implemented state management with Redux for efficient data handling. The app features a responsive design, intuitive user interface, and seamless user experience, demonstrating proficiency in front-end development, API integration, and modern state management techniques.

Simple Ollama AI

Developed an AI-powered web application using **React** to interact with the Ollama API. The app allows users to input queries and receive intelligent, real-time responses. Implemented a clean, responsive interface for seamless user interaction and leveraged asynchronous API calls for efficient data handling. This project demonstrates skills in front-end development, API integration, and building interactive AI-driven applications.
